

Fittings & Accessories

Fittings & accessories

The long life of steel and bronze windows is supported by the appropriate fittings. But fittings enhance the elegance, character and style of a window. Our fittings are made from high quality materials such as brass and stainless steel and are available in a range of attractive finishes, such as satin nickel, gun metal or dark bronze, to suit several applications. A selection of handles, stays, folding openers, hinges, pivots, catches and bolts give you the variety you seek.

Generic Accessories

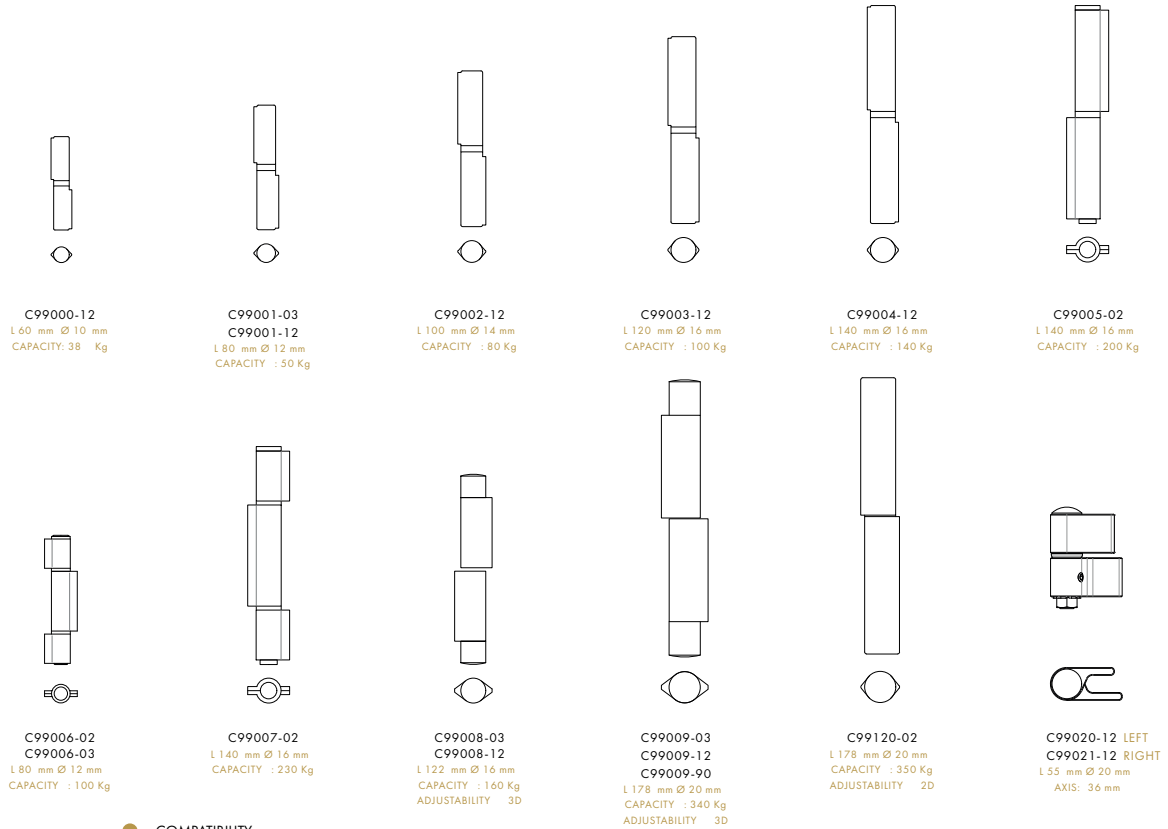

A window is as good as its fittings and accessories and good accessories become a challenge when sashes have to operate in reduced spaces and fixed to slender frames. We have selected fittings from reliable manufacturers and adapted them in-house to our window and door systems.

Heritage Collection

With the Heritage collection, OTTOSTUMM offers a unique variety of window fittings from different eras. These fittings are suitable for a variety of window types, which were common in the late 19th to mid-20th century. They reflect country or culture-specific peculiarities in terms of use and function of windows in those times.

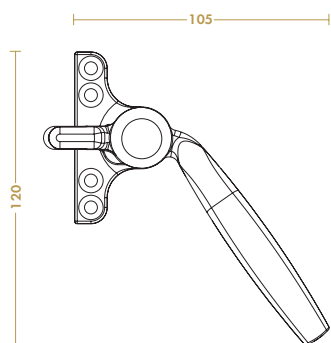

Handles, peg stays, cremone bolts and connecting rods usually were visible and had a much higher esthetic claim in the past than what they do have today. Fittings did not only have the practical function, like the opening, closing and airing, but they should also enhance and beautify the windows.

A few manufacturers produce even today these historic fittings, with great attention to detail, which gives OTTOSTUMM the possibility to equip steel windows for national heritage with fittings that meet the expectations of historians and architects who have specialized in the conservation area.

These historic fittings exude a strong nostalgia and mainly because of their rudimentary functions and playful character, they are increasingly used again for classic windows in contemporary architecture.

Timeless Collection

Walter Gropius (1883 – 1969) was a German architect and founder of the Bauhaus School, who, along with Ludwig Mies van der Rohe, Le Corbusier and Frank Lloyd Wright, is widely regarded as one of the pioneering masters of modern architecture. In 1922, Gropius designed his famous door handles, now considered an icon of 20th-century design and often listed as one of the most influential designs to emerge from Bauhaus.

The first Gropius handles were manufactured the same year by the bronze foundry S.A. Loevy and installed in the city theatre of Jena as well as in the "Fagus-Werke" in Alfeld. This first model still had a rounded elbow shank instead of the angled square bar shank, which was designed shortly after in 1923. In the following years, many other German bronze foundries started to manufacture Bauhaus style handles, slightly differing from the original design. The last catalogues featuring handles with a Bauhaus design disappeared around 1939 as the Second World War started to absorb all production capacities for warfare. In the early 1980's the interest for this timeless Bauhaus design revamped and with more flexible production technology, the range was widely extended introducing new fittings able to please contemporary fenestration requirements.

One Collection

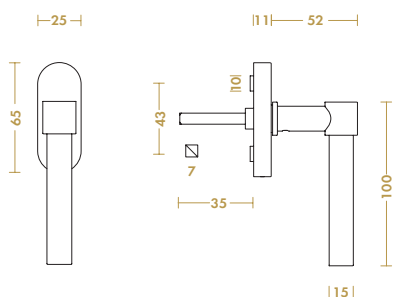

Piet Boon (b. 1958) started his career as a contractor. Today he is one of the most well-known Dutch designers. Together with his wife Karin, he leads a design studio with a team of architects and designers.

The point of departure for his designs is that, besides a wellthought-out design, they should be timeless and made to last. A distinctive element for his work is his love of pure, genuine and natural materials.

The ONE collection by Piet Boon can be described as basic chic, with attention to operational comfort and detail. Not only the design but as well the material is made to last, being fully made of stainless steel.
